

Strategic planning

We need more Data.

Current Machine Learning Model with current set of data, there's 50% accuracy, which isn't good for deploying in production.

What kind of data we need?

We've done feature engineering, and we found top 5 most importance data for the model.

■ **unit_price**

■ **temperature**

■ **hours from timestamp**

■ **quantity**

■ **month and week from timestamp**
